

Basic Autism Protocol

These protocols are designed to suppress the pathogens.

This protocol presumes that Autism stems from a combination pathogen driven toxin overload. Priorities:

- Non invasive and easy to use
- Systemic Pathogen suppression
- Neuro-detoxification

Anti Parasitic	Qty	Dosage	Role & Notes
Hormesis Sleeping Pad	1	Sleeping Mat in Bed	<ul style="list-style-type: none"> • Disrupts organism life cycle; • Stimulates immune system • Inhibits opportunistic fungus and yeast overgrowths • Active within blood/brain barrier • Long-term support • Ease of use.
Beet Top Product	300	mg per meal	Thins Bile for flow. Hepatic dysfunction is a given by the time neural symptoms occur.
Neural Detoxification			
NeuroMed	1	Tsp	Inhibits pathogen toxins effects, supports Methylation, and lipid detoxification.
4:1 Oil	1-2	Tbsp/day	Balanced fatty acids increase turnover
Diet			
High Fat / Low Carbohydrate	3	Grams/day	
Detox Diet as possible			Minimize sugar based food supply that feeds bacteria. Eating program minimizes: insulin, Glucose, mannose.
Spectrum Probiotics	3	Grams / Meal	Helps support gut flora
Energetics			
Hyperbaric	30-60	Minutes/day	Maintain optimal tissue oxygen saturation: <ul style="list-style-type: none"> • Aids detoxification • Inhibits anaerobic organism overgrowth.
PEMF Exposure	15-30	Minutes 3x/week	Facilitate neural regeneration and detoxification.

Level-2 Support

These supplements provide additional support using targeted nutritional components that aid the immune system. Level-2 is designed as an addition to the basic protocol.

This protocol component presumes unidentified pathogens contribute :

- Provide targeted support for the immune system;
- Provide enhanced pathogenic energy intervention.

Enhanced Immune Support	Qty	Dosage	Role & Notes
Full spectrum mushroom Blend	2.5	Grams/day	Hetero-polysaccharide and immune system modulator widely useful to enhance immune performance during
Colostrum	3	Grams/day	Helps immune system targeting of invading pathogens
Samento	1	As Directed	Cats claw is a useful interfering with life cycle of Lyme pathogen and other opportunistic pathogens that exploit immunological overload.
Enhanced Detoxification			
Fibro, Protease and Lipase enzymes	1	Grams daily on an empty stomach	Fibrin enzymes help expose pathogens to immune system, Protease and Lipase help break down waste products which contribute to detoxification symptoms.
Silymarin	500	mg per meal	Cellular liver detoxification support
